

# Maintenance Guide

LVT, WPC, & SPC Floors

Updated: August 17, 2018

We thank you for choosing our Forest Click or Wild Wood flooring. This Maintenance Guide was written to provide instructions on how to ensure the resilience of your new floor for years to come.

## Recommended preventive measures:

- Floors must avoid exposure to direct sunlight for prolonged periods, intense heat may cause discoloration.
- Never flood the floor or leave puddles of any type of fluids.
- Protect your floor from tracked-in dirt by using mats at all entrances leading outside.
- Prevent indentations by applying floor protectors on the legs of chairs, appliances, and all heavy furniture.
- Never push or drag furniture or appliances across the floor. Instead, place hardboards between the flooring and when moving any objects.

## Proper cleaning and floor maintenance:

- Sweep the floor regularly with a soft-bristle broom.
- Always read the precautionary information on all cleaning products before use.
- Use a low pH (neutral) cleaner for extensive cleaning.
- Spilled liquids must be cleaned up immediately.

## DO NOT use the following:

- Ammonia, bleaches, abrasives, and other potent products
- Vacuum cleaner with a rotating beater bar or Steam mops
- Soap based detergents or floor wax

IN.id products are **thoughtfully** designed  
& *Elegantly* crafted for you.
